

JOYSTICK PILOTING FOR INBOARDS

Boaters of all skill levels will appreciate the easier, more intuitive boat control that Joystick Piloting for Inboards from Mercury Marine® delivers through integration of the engine and thruster package.

- Light ring indicates current state of the system. (Green when system is ready, amber in the direction that the user is directing the joystick when the system is in use, etc.)
- JPI is compatible with gasoline or diesel propulsion systems – an industry exclusive.
- Available for single engine inboard boats – an industry exclusive.
- Dual JPI comes standard with thruster only mode - allows the driver to easily adjust heading by “bumping” the joystick to the left or right.
- JPI is compatible with Vetus or Side Power brand thrusters – this allows for ease of integration on almost any inboard boat package.
- All Mercury controls and rigging components fall under the same warranty policy as the engine for a given boat.
